

Here are the installation steps to launch the Azure Data Gateway Express setup:

Installation Steps for Azure Data Gateway Express

1. **Download the Installer:**
 - Go to the [Azure portal](#).
 - Navigate to **Data Gateway** and select **Download** to get the latest Data Gateway Express installer.
2. **Run the Installer:**
 - Locate the downloaded installer (usually in your Downloads folder).
 - Right-click on the installer file and select **Run as administrator**.
3. **Accept the License Agreement:**
 - When prompted, read and accept the license terms to proceed with the installation.
4. **Select Installation Path:**
 - Choose the folder where you want to install the Data Gateway. You can use the default location or specify a different one.
5. **Sign In to Azure:**
 - After installation, you'll be prompted to sign in to your Azure account. Use the account that has permissions to configure the gateway.
6. **Register the Gateway:**
 - Provide a name for your gateway and select the region that matches your Azure resources.
7. **Configure Data Source:**
 - You can configure your data sources during the setup process. Choose the data sources you want to connect to, such as SQL Server, Azure Blob Storage, etc.
8. **Finish Installation:**
 - Once all steps are completed, click on **Finish** to complete the installation process.
9. **Verify Installation:**
 - You can verify that the gateway is running by going back to the Azure portal, navigating to the **Data Gateway** section, and checking the status of your gateway.

Post-Installation

- **Monitor Gateway:** Once installed, monitor the gateway's performance and ensure it's connected to your data sources.
- **Updates:** Keep your Data Gateway updated by checking for new versions periodically.
